DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 6/9/05 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because an English translation was not included with each cited foreign references. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

The information disclosure statement filed 9/27/05 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because an English translation was not included with each cited foreign references. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Art Unit: 3712

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-8, 10-16, 18-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Takahama et al. (US 2003/0032478), "Takahama".

Claim 1, 6, 14 and 18: Takahama discloses

- projecting a moving image on a predetermined area in a game board of a game machine from the back of a panel (Fig. 25, Paragraph 130), wherein the moving tennis ball or opponent is analogous to the moving image; and
- projecting a still image on the game board outside of the predetermined area (paragraph 137), wherein the court is the still image or background for the display,
- wherein a position, a number, and a size of said predetermined area where said
 moving image is displayed are set as parameters (paragraph 137), and more
 than one parameter is changed at a predetermined time while the moving image
 and the still image are displayed (paragraph 137).

Art Unit: 3712

Furthermore, it is necessarily present that a projection mechanism capable of projecting a moving image can project a still image on a game board as it is a fact that a projection of a moving image is simply a series of still images rapidly shown one after another. Thus, the display of Takahama is capable of the moving and still images of the claimed invention. Regarding the position, number and size of the predetermined area of the moving image is simply a matter of storing the proper plurality of still images on a computer readable medium and sending those images to the projector.

Claims 2 and 19: Takahama discloses changing more than one of said parameters when a state of the game machine changes during a game (paragraph 139).

Claim 3: Takahama discloses changing more than one of said parameters when a player comes close to or moves away from the game machine by at least one predetermined distance (paragraph 104).

Claim 4: Takahama discloses projecting game machine information as the still image (paragraph 138). Game information such as the tennis court, opponent character, scores, and acquired sets.

Claims 7 and 15: Takahama discloses said control unit causes said projection mechanism to alter at least one of said parameters when the predetermined time equals a time of a change of a game state in the game machine (paragraph 139). Depending on the speed and direction of the serve, the ball character will 'move' more (change of parameters).

Art Unit: 3712

Claim 8: Takahama discloses means for inputting a game machine information image that displays game machine information of the game machine, and wherein said control unit causes said projection mechanism to projection display the game machine information image as said still image (paragraph 138). Game information such as the tennis court, opponent character, scores, and acquired sets.

Claims 10, 16, and 21: Takahama discloses said parameters when the predetermined time equals at least one of a time at which said control unit has determined that a player has come within a predetermined distance to the game machine (paragraphs 66 and 139), on the basis of a sensor signal outputted by a user sensor, and a time at which said control unit has determined that the player has moved away from said game machine more than a predetermined distance (paragraphs 66 and 139), on the basis of the sensor signal.

Claim 11: Takahama discloses a main control unit which causes said display apparatus for a game machine to projection display said moving image and said still image (fig. 27, item 1400, paragraph 133).

Claim 12: Takahama discloses a user sensor that outputs a sensor signal permitting determination as to whether a player has come within a predetermined distance to said game machine; and wherein said main control unit causes said display apparatus for a game machine to projection display said moving image and said still image such that at least one of said parameters is altered when the predetermined time equals at least one of s time at which said main control unit has determined that the player has come within

Art Unit: 3712

the predetermined distance to said game machine (paragraphs 66 and 139), on the basis of the sensor signal outputted by said user sensor, and a time at which said main control unit has determined that said player has moved away from said game machine by more than said predetermined distance (paragraphs 66 and 139), on the basis of said sensor signal.

Claim 13: Takahama discloses a game machine as defined in claim 10 (fig. 25, paragraphs 130-139).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 3712

Claim 5, 9, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahama et al. (US 2003/0032478), "Takahama" in view of Wells (US 6,846,238), "Wells".

Claims 5, 9, and 17: Takahama discloses the invention as claimed except for displaying at least one of a broadcast and a distributed image as at least one of said moving and still images. Instead, Takahama teaches a one or two player game wherein the game is played without being networked (paragraph 74). In an analogous gaming reference. Wells teaches "broadcast events, including television programming, may be provided to the main display monitor, the secondary display monitor or the remote display" (Wells, col. 13, lines 59-67). One of ordinary skill in the art would have seen the benefit of modifying Takahama with a secondary display since "many game players would like to continue game play while performing an activity, such as getting a meal or going to a sports book..." This action would require the player to leave the game which the player is reluctant to do because the player does not want to give up the machine. Further, the gaming establishment is reluctant to reserve the machine because while a gaming machine is reserved it does not generate revenue (Wells, col. 2, lines 18-38). Wells teaches solving this problem with a secondary display to provide food menus, make sports wagers, or watch broadcast television (col. 13, line 51 – col. 14, line 16). Therefore, it would have been obvious to one or ordinary skill in the art at the of the instant invention to modify Takahama with a secondary display displaying broadcast television as taught by Wells to provide additional services as discussed while still playing the game.
